Document EP0249939 is regarded as the prior art closest to the subject matter of claim 1 and also discloses a sound-insulating composite part.

The subject matter of claim 1 differs from that composite part by the features of the characterising part.

- The subject matter of claim 1 is thus novel (PCT Article 33(2)).

The present invention addresses the problem of providing a composite part of the above-mentioned type in which the absorber layer serves to compensate for structural level differences, such as recesses, formed in a car body metal panel that acts as a substrate.

The combination of features in the characterising part of claim 1 is neither known from nor suggested by the available prior art.

- The solution proposed in claim 1 of the present application can therefore be considered inventive.
- The invention is industrially applicable.
- Claims 2-10, which are dependent on claim 1, meet the requirements of PCT Article 33(1).
